Voluson Expert 20

Go Beyond the Limits

Voluson™

A Healthier Future for Women

Driven to outperform, outpace, and outdo the impossible. Your world is fueled by determination. Finding critical answers to deliver your best patient care while managing a busy practice. To make the greatest impact, you need to go further, faster.

That's why we created the Voluson Expert 20. Because you and your patients demand the highest quality and performing ultrasound system.

Go beyond your current limits with our premium ultrasound system designed for your increasingly complex cases and demanding schedule. Discover life-changing answers with next-level imaging for faster assessment, detection, and diagnosis. And save valuable time with breakthrough Artificial Intelligence (AI) and automation tools that uncover new efficiencies at every step.

With the Voluson Expert 20, accelerate your momentum and experience more possibilities than ever.

Expand your capabilities

Faster. Sharper. Clearer. Amplify performance and simplify scanning with our most advanced architecture yet, that unlocks new imaging and processing power. Generate spectacular 2D/3D and color Doppler images with increased penetration and stunning clarity, to help visualize critical details needed for diagnostic assurance.

Expand your imaging capabilities with the most powerful engine to date, the **Lyric Architecture**. It delivers the most progressive and adaptive capabilities yet to achieve high-resolution, detailed images – independent of body habitus and other difficult scanning conditions. The Lyric Architecture:

- Generates new levels of penetration, resolution, and frame rates to reveal fine anatomy in 2D/3D/4D with ease
- Delivers uniformity throughout the image with increased spatial and contrast resolution
- Works in harmony with our probe technology offering advanced imaging options
- Opens doors to unique Voluson imaging capabilities

Lyric Architecture allows you to set new standards in image quality for years to come.

Amazing detailed tissue differentiation

Shown on and off, Augment helps reduce noise while increasing penetration for a robust, cleaner image even in difficult to scan situations like high body mass index (BMI)

2D imaging

21-week fetal profile

27-week kidneys with RAB7 probe

Ductal arch clearly defined at 27 weeks

3D Imaging

Diaphragm highlighted with HDlive™ Silhouette in a 26-week fetus

Visualize the highly detailed bone structure of 21-week fetus with HDlive Studio

Ovary imaged with RIC10-D and HDlive Studio

Color Imaging

Umbilical artery pulsed wave Doppler, automated with Flow Profiles

27-week abdomen with SlowflowHD

Circle of Willis shown with Radiantflow™, automated with Flow Profiles

Refine your clinical insights

Rely on the Voluson Expert 20 to help you uncover crucial answers with ease—when accuracy and timing mean everything. Our full suite of industry-leading tools and advanced probe technology provide the image detail, speed, and flexibility you need to support early detection and intervention.

Early Pregnancy

Improving detection rates of chromosomal and structural anomalies in the earliest stages of development is critical for better decision making. With small anatomy, exposing anomalies requires clear, high-resolution imaging and simplified assessment tools. With features like **SonoNT** and **HD*live* Studio**, you can feel confident seeing even the tiniest detail.

Fetal Heart

Identifying fetal cardiac abnormalities earlier means you can intervene sooner, plan for delivery, and potentially improve outcomes. The Voluson Expert 20 provides progressive tools to help distinguish the tiniest structures with stunning clarity to detect patient answers faster.

Pelvic Health

Symptoms such as pelvic pain, post-menopausal bleeding, genitourinary dysfunction, and infertility can be confusing and concerning for your patients. Exceptional imaging and advanced analysis tools like **Fibroid Mapping** and **SonoPelvicFloor^{2.0}** can provide clinical insights into gynecological health.

Illustrate position of fibroids and relationship to endometrium in 3D. Classify each fibroid according to FIGO® classification, while simplifying communication with colleagues, referring physicians and patients.

Pregnancy

6-week embryo acquired with the RIC5-9 probe

Nuchal Translucency measurement automated with SonoNT

8-week embryo with HD*live* Studio

Fetal Heart

Aortic arch shown with Radiant*flow* in a 26-week fetus

Pulsed wave Doppler on the right ventricular outflow tract (RVOT)

33-week 4-chamber heart with Radiant*flow*

Pelvic Health

Septate uterus rendered with Uterine Trace

Uterine blood flow with Slow*flow*HD

Serial planes of the pelvic floor anatomy, demonstrated using AI-driven SonoPelvicFloor^{2.0}

Accelerate your efficiency

Experience a new level of efficiency with the highly intuitive and customizable ultrasound that promotes progress and productivity. Save time, save steps, and save effort by leveraging the power of Artificial Intelligence (AI) and easy-to-use automation tools that streamline workflows and make a real impact every day.

The SonoLyst Collection

Enlist a virtual on-board assistant utilizing the power of AI to help simplify exams. This scalable AI solution can be customized based on user's exam protocols and scanning levels through image recognition and automated annotation/measurements. SonoLyst provides staff education and exam quality assurance adding exam efficiency and consistency to the practice.

SonoLystlive: No freezing, no annotating, no storing. Take image recognition to the next level by capturing images as you scan, in real-time. Let the tool measure, annotate, and store images, checking it off the list of required views. SonoLystlive helps reduce keystrokes and exam time while helping ensure more complete exams. SonoLystlive is available:

- In the first trimester to easily perform a detailed 11-13 week scan
- For 2nd trimester anatomical evaluation of the fetus, reduce exam time up to 30%*

SonoLystIR: Simply scan, then freeze and SonoLystIR (Image Recognition) does the rest. Using ISUOG practice guidelines, SonoLystIR automatically detects the recommended views. It identifies anatomy, then selects all applicable annotations and measurements. Confirm, and data is entered into the Scan Assistant checklist and report, enhancing workflow and reducing variability between operators for improved consistency.

SonoLystX: Build and refine your skills with SonoLystX. Using AI, the system compares the image or view acquired to standard criteria accepted by experts to ensure it meets clinical standards. SonoLystX can help enhance accuracy and quality with anatomy diagrams plus the ability to insert image examples. Ideal for teaching and training, progress can be monitored for quality

SonoPelvicFloor^{2.0}

Analysis of the pelvic floor anatomy can be complicated. Through AI, SonoPelvicFloor^{2.0} simplifies the exam process by automating, plane alignment, live C-plane tracking, and measurements while offering workflow guidance to improve efficiency while eliminating uncertainty. **Utilizing SonoPelvicFloor can help reduce your pelvic floor measurement exam time by 80%.****

SonoCNS

AI-driven SonoCNS supports consistent measurements and helps drive workflow efficiency by helping align and display recommended views and measurements of the fetal brain from a 3D volume.

SonoBiometry

Repetitive tasks are a daily challenge especially in fetal assessment. SonoBiometry helps reduce keystrokes and improve exam time by automatic caliper placement and fetal measurements of bi-parietal diameter (BPD), head circumference (HC), abdominal circumference (AC), femur length (FL), humerus length (HL), cerebellum, cisterna magna, and lateral ventricle.†

Flow Profiles

Simplify color and pulsed wave Doppler modes with predefined and optimized preset tool, Flow Profiles. Easily move through.

*Internal study of mid-trimester anatomy scans using SonoLystlive versus manual exam, not including image review process.

**Versus manual exam time.

†As compared to manual measurements.

Modern yet familiar user interface incorporating Voluson's simple and seamless workflow.

Personalize the user interface for your unique preferences and select system colors to suit your mood with more than 4,000 color combinations.

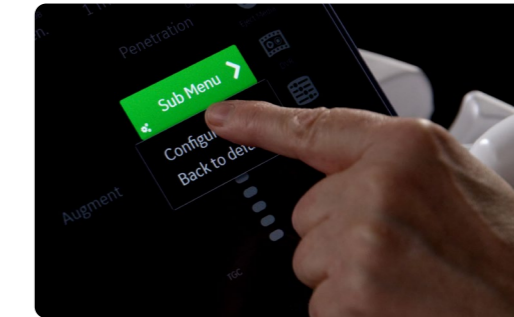

Conveniently located probe ports for easy access.

Effortlessly incorporate security into daily workflow to log on using RFID.

The 23.8" LED monitor display offers 3 image sizes including unique full screen imaging that allows you to work comfortably and see finer details with ease.

Customizable touch panel for user individuality and productivity.

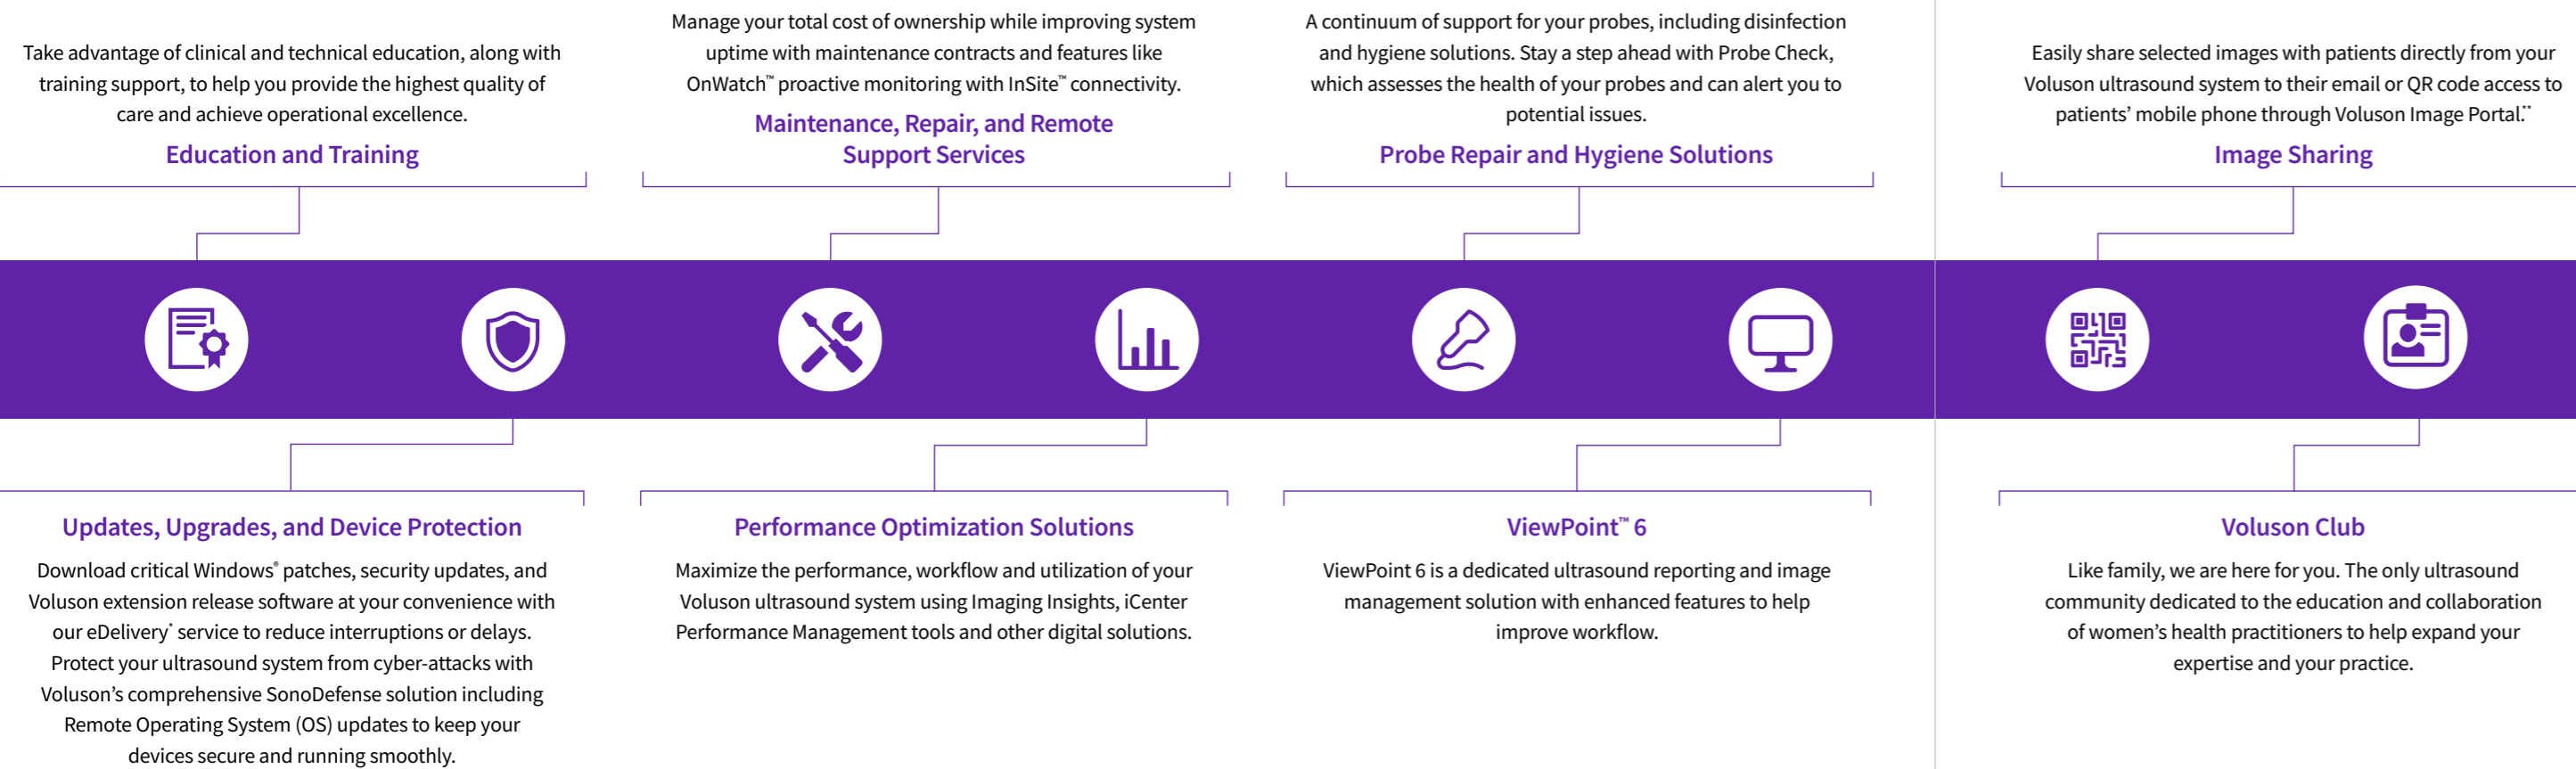

Work smarter using Respond probe activation which automatically initializes probes and presets when removed from the probe holder.

Integrated gel warmer to enhance patient experience.

Exceed your expectations

Experience more—more services, more support, and more future-focused solutions. Get connected and leverage our entire ecosystem for expert advantages now and in the future.

*Not available in all countries.
**WLAN required.
