

**Take anywhere
adaptability**

Venue Go™ Ultrasound

For adaptability where you need it

Created for your point of care, Venue Go ultrasound was designed for your needs and adapts for your challenges. Its flexible design allows you to go from cart to table to boom with ease, providing your department with needed adaptability. AI-enabled tools help enable fast assessments, simplify the complex and support your life-saving decisions. Built with a small footprint and increased portability, Venue Go provides the adaptability you need to scan, diagnose and treat with ease and accuracy across a wide range of environments and care areas.

Long-lasting power

Scan time of up to two hours and wireless dual probe connectivity with built-in charging

Easy to reach probes

Smart cable management puts probes safely up top and cables out of the way and off the floor

Big and clear

A 15.6-inch touch screen durable enough to withstand bumps, bangs, and splashes

Easy to clean

Smooth and seamless surface supports infection control efforts

A robust, portable system

A fully featured, multi-purpose ultrasound system made for your point of care with 3 wired probe ports

At your side

Unit detaches from adjustable cart and allows for use on table top or standard VESA® connection

Reliable support

Venue Go is backed by a multi-year warranty⁶

Supported by AI

Precise tools ensure accurate calculations and your quick assessments

Advanced transducers designed specifically for your point of care

Powered by cSound™, our durable ultrasound transducers provide exceptional image quality with feature designs that help enhance ease of use, ergonomics and patient comfort. From critical care, perioperative, and MSK to pediatrics and NICU, our transducers are available in a broad range of types from XDclear™ to wireless dual probes that are designed to meet the needs of your specialty.

Let's simplify the complex

Venue Go ultrasound systems are built specifically for point of care medicine across the facility. By streamlining workflow, they help users of different departments and experience levels confidently conduct patient exams.

AI-enabled tools support your confident decision-making

AI-resources based on synthesized data and proprietary algorithms simplify manual processes such as measuring and finding B-lines, helping ensure consistency from user to user.

Documentation tools streamline exams

Protocol management and easy documentation tools help users conquer busywork by readily providing the information they need, reducing the need to manually type findings.

Broad probe portfolio for exceptional image quality

Venue Go features a wide variety of linear, curved, and cardiac transducers that are designed for a multitude of specialties. Wired and wireless probe options are interchangeable* across systems giving you the flexibility you've been looking for.

A common platform ensures a consistent experience

All systems are built on one platform with the same interface to ensure familiarity and simplify training across your facility.

Built-in teaching assistance facilitates learning

Scribble assists training with a touch-operated pointer and free-drawing capabilities that can also be visible on an external monitor or shared screen. The **Venue Coach MSK** provides reference images to guide novice users in scanning the correct anatomy and makes documentation easy. **Caption Guidance** helps even new users capture diagnostic-quality images with its built-in AI-driven software.

Touch, pinch, swipe

No buttons. No knobs. A familiar touch screen with a simple, clear and intuitive interface works even with gloves or screen covers.

Helping you work smarter, not harder, with AI-proven tools

From novice to expert users, Venue Go has been designed and tested to be more accessible, and it features a number of AI-enabled automated tools to accelerate clinical workflow while also reducing the fatigue of repeated and difficult tasks. Utilizing proprietary algorithms, we synthesize data from numerous patients to ensure accurate calculations for clinical confidence.

Caption Guidance™

Real-time, turn-by-turn on-screen guidance prompts your probe movements to help new POCUS users capture diagnostic-quality cardiac images.

Real-time EF

Enables continuous calculation of real-time ejection fraction without having to conduct an ECG. Capture instant, precise results—within +/- 10 points of experts in 86% of cases¹

Shock toolkit

Facilitates shock evaluation by focusing on key organs linked to patient status: the heart, lungs, and inferior vena cava.

Associated rapid assessments:

- **Auto IVC**
Measure IVC collapsibility or distensibility accurately and automatically. **Equivalent to an expert user's ability 87% of the time²**
- **Auto VTI**
The VTI trending function helps clinicians quickly visualize the trend so the next course of action can be determined. **Experience up to 82% time savings³**
- **Auto B-Lines**
Calculate overall lung score in one step. You can also use it with Lung Sweep to highlight B-lines and display the frame with the most B-lines per rib space. **As highly reliable as visual counting⁴**

cNerve

During the scouting phase, use cNerve to identify the nerve landmark and see it highlighted on the image. **Helps detect and track the nerve in 99% of cases while scanning or reviewing a stored clip⁵**

Simplify your workflow

Everyone is looking to eliminate busywork at the point of care, and that's what Venue systems do. Easy documentation and protocol management tools reduce keystrokes, facilitate exam comparison, and streamline image organization for efficient review.

Venue Coach MSK

This easy-to-use exam documentation tool assists users through exams by providing reference images and anatomy markups.

Multiple anatomical areas and helpful video tutorials help clinicians to acquire the scans they need.

Focus areas include:

- Shoulder
- Elbow
- Knee
- Wrist/Hand
- Hip
- Ankle/Foot

Bladder Volume Tool

This simplified workflow tool features reference images as guidance and supports clinicians in calculation of the bladder volume. The tool is designed to guide bladder volume measurements to make it simple and fast.

Auto Volume Flow

Use the auto measurement to calculate the brachial or radial artery flow volume in real time for dialysis procedure preparation. This helps calculate the arterial flow volume in real-time (based on vessel diameter and PW spectral doppler flow measurement).

eFAST Diagram

Allows users to assess and document patient status, from internal bleeding to pneumothorax, with up to 80% reduction in keystrokes.⁷

Scribble

Assists training with a touch-operated pointer and free-drawing capabilities.

Lung Sweep

Visualizes a dynamic panoramic view of the entire lung.

Catheter to Vessel Ratio

Supports you in selecting the appropriate size catheter based on vessel diameter.

Lung Diagram

A single-view diagram of anatomical lung segments with one-click image storing. Enables calculation of an overall Lung Ultrasound Score to help response to therapy.

Renal Diagram

Simplifies hydronephrosis documentation and follow-up. Minimizes typing with labeling tools.

Made for your point of care

Inspired by the needs of point of care physicians, Venue Go supports a wide range of environments.

Critical Care

AI-enabled tools, an intuitive interface, a compact footprint, and large screens optimize Venue Go for your quick decision-making and bedside interventional procedures

Emergency Medicine

A straightforward design, AI-enabled Auto Tools and nimble maneuvering help emergency room physicians quickly triage patients and determine care pathways.

[Learn more](#) →

Musculoskeletal

Clear and effective tools help MSK practitioners assess tendons, muscles and joints and manage patient progress during a course of treatment.

[Learn more](#) →

NICU & Pediatrics

The Venue Go AI-enabled tools for pediatrics[^] enables fast and confident diagnostic scans without ionizing radiation for evaluation of the tiniest patients..

[Learn more](#) →

Perioperative Anesthesia

Simple, fast and precise tools support your clinical decision making so you can provide the best clinical outcomes for your perioperative patients.

Designed for security

SonoDefense is GE HealthCare’s multi-layer strategic approach to cybersecurity and patient data privacy for ultrasound, and designed to:

- Keep the ultrasound machine safe and functional in the face of cyberthreats
- Protect patient data on the machine from unauthorized access
- Enable you to successfully implement HIPAA and security policies, while still managing productive daily workflows

Defense-in-depth strategy

SonoDefense is designed for maximum security protection with a defense-in-depth strategy that incorporates security controls deployed in multiple layers. This approach enhances security by protecting the system against any particular attack using several independent methods.

SonoDefense

About GE HealthCare Technologies Inc.

GE HealthCare is a leading global medical technology, pharmaceutical diagnostics, and digital solutions innovator, dedicated to providing integrated solutions, services, and data analytics to make hospitals more efficient, clinicians more effective, therapies more precise, and patients healthier and happier. Serving patients and providers for more than 125 years, GE HealthCare is advancing personalized, connected, and compassionate care, while simplifying the patient's journey across the care pathway. Together our Imaging, Ultrasound, Patient Care Solutions, and Pharmaceutical Diagnostics businesses help improve patient care from diagnosis, to therapy, to monitoring. We are a \$19.6 billion business with approximately 51,000 colleagues working to create a world where healthcare has no limits.
